

# Moneybox

## The workbench

- 1 packet of sequins
- Craft glue
- Estapol gloss or varnish
- Poster paints (non toxic)
- Paint brush
- 1 wooden glass front memory box frame
- Power drill

### Step 1.

Drill a hole in one side of the box large enough to fit coins through. Paint the wooden sides and front of the box.

### Step 2.

Varnish the box one side at a time then while it is still wet apply sequins in rows. Continue this process until all the sides are covered with sequins. Leave to dry then recoat the box with more varnish covering over the sequins to secure them from falling off the box.

### Step 3.

Turn the box to the back and take off the back panel, paint inside the box being careful not to paint the glass. Paint the back panel on both sides then replace back onto the box when dry. Fill up the moneybox with lots of money.
